

# Where We Play

We're in the game of innovating business systems to deliver valuable products and services differently. We work with the designers, engineers and operations people who plan, create and deliver our products and services – and with the executives who brief them.

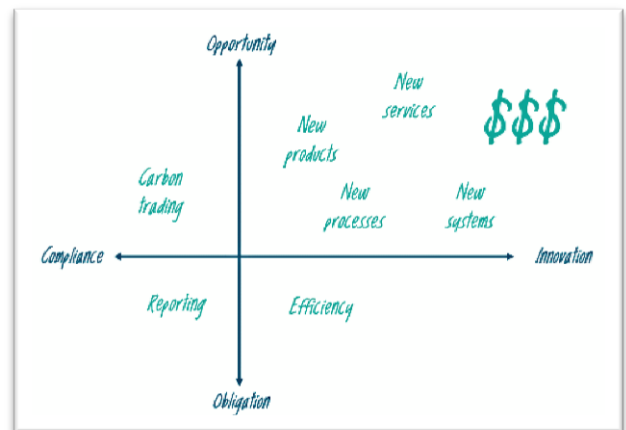

The three challenges we see for regenerative business change-makers are:

1. **“Getting” it** – understanding the next wave of business innovation emerging from regenerative thinking.
2. **Doing it** – mastering the learnable skills at the heart of innovation delivery, change management and project success.
3. **Thriving** – developing the core strengths to live well and have fun on the journey.

## “Get” it – understand Regenerative Business design

Since the 1960s, developers have been designing solutions for delivering products and services in smart new ways that generate win/win/win models for business prosperity, community development and eco-system regeneration.

Businesses stuck in 20th century mindsets risk missing out on ‘the greatest opportunity since the invention of money.’ Understanding the straightforward design principles and strategies of regenerative business enables our clients to move beyond mainstream efficiency, Corporate Social Responsibility and reporting to explore for new opportunities for new products, services and cash flows.

## Do it – build the core skills of successful innovation delivery

Getting things done used to be a mysterious talent – but now we know the “how of the how” of successful innovation delivery and change management. We build your knowledge and skills in the tools and processes of innovation adoption.

We change your thinking – you change your results (and your world).

## Thrive – grow the personal capability and resilience of regenerative business innovators

A lot of people get things done by working very hard. There's nothing wrong with hard work – however hard work in ineffective directions creates suffering instead of results. We develop the individual skills and core strengths to burn brightly instead of burning out.
